

**Amendments to the Specification:**

Please amend the final paragraph on page 11, at lines 32-34, with the following:

The A radical which is derived from a primary or secondary amine is generally a group of the formula  $[-N^5R^6,] \text{ } \underline{-NR^5R^6}$  ,  
where the variables  $R^5$  and  $R^6$  are each independently defined as follows:
